APPLICATION NOTE

Dummy Detector

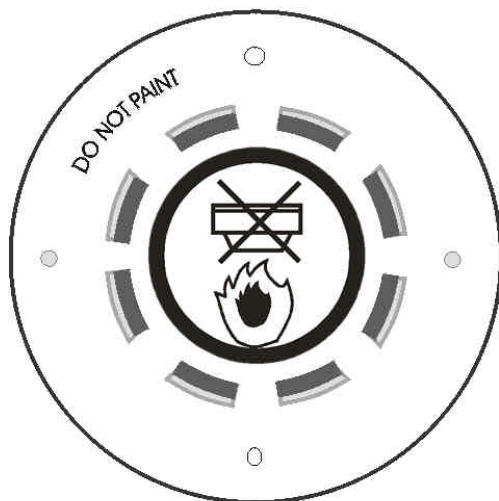

Hochiki has introduced a dummy detector to maintain loop continuity during maintenance and commissioning. This then allows the system wiring to be verified whilst building work is still being carried out. The unit also protects the functionality of detectors and bases at risk from the ingress of dust and dirt during fire alarm detection system installation.

Once the zone has been tested and approved, the dummy detector head must be replaced with an appropriate smoke detector for life/property protection.

Product Features

- The dummy detector will fit onto any Hochiki Conventional Base.
- The unit can be re-used as many times as needed
- Fits to the base in the same way as a standard smoke detector.
- As shown below the dummy detector is clearly marked to warn installers that it is not a fully operational smoke detector.
- Can also be used on most Hochiki Analogue Bases.
