LEAKtrace

Conventional
Water Leak Detection

LEAKtrace — Conventional Water Leak Detection. Simple. Reliable. Ready.

Water damage is one of the most costly and disruptive risks facing buildings of all kinds. UK insurers pay out close to £1 billion in water damage claims every year — and for many businesses, even a minor escape of water can mean downtime, temporary relocation, and significant financial loss. For smaller sites and straightforward projects, the answer doesn't need to be complex. It needs to be dependable.

Introducing LEAKtrace — Hochiki's conventional water leak detection system, designed specifically for smaller, simpler installations where ease of deployment and reliable performance matter most.

Conventional
Water Leak Detection

Straightforward to install. Serious about protection.

LEAKtrace is built around a compact, wall-mounted control panel that is both discreet and simple to install — making it the ideal choice for installers and specifiers who need a dependable solution without unnecessary complexity. Designed specifically for smaller sites and straightforward projects, it delivers professional-grade water leak detection that is quick to deploy and easy to manage, without the overhead of a large multi-zone system.

LEAKtrace supports both point detection (via floor probes) and linear detection via leak detection cable — or a combination of both within the same zone — giving installers the flexibility to suit almost any layout. Each zone accommodates up to 50 metres of detection cable or up to 20 probes, and the bright blue LED indicators on each interface allow fast, intuitive identification of the leak location.

Battery backup ensures the system continues to monitor around the clock, even during a power outage — so protection never sleeps. Where required, LEAKtrace can be supplemented with remote indicators, sounders, and beacons to further enhance on-site awareness, and can be linked to solenoid shut-off valves for an automatic first response to a detected leak.

The right tool for the right project.

Not every installation calls for a large, multi-zone addressable system. LEAKtrace is Hochiki's answer for those projects where simplicity, speed of installation, and a lower cost of ownership are the priorities — without compromising on the detection quality and reliability that the Hochiki name demands.

Whether protecting a residential apartment, a small office, a plant room, or commercial cellar space, LEAKtrace delivers early warning where it matters, helping to prevent costly damage before it takes hold.

For larger or more complex projects requiring fully addressable water leak detection with extensive loop coverage and BMS integration, Hochiki's LEAKalarm system is also available.

Hochiki is a wholly independent, multinational, publicly listed group of companies with over 2000 employees working across six manufacturing plants, 38 sales offices and 14 subsidiaries.

One of the world's leading manufacturers of commercial and industrial fire detection and emergency lighting solutions, Hochiki has acquired global acceptance as the benchmark for high-integrity and long-term reliability.

97%

of customers surveyed agree that Hochiki design and manufacture high quality and robust products

95%

of customers surveyed are happy with our team's product knowledge

93%

of customers surveyed are satisfied with Hochiki's understanding of their needs

Hochiki's facilities in Japan, the United States of America and Europe design and manufacture products and provide technical support suited to local standards and customer requirements.

Total commitment to meeting the needs of individual national markets has reinforced the company's global reputation, resulting in Hochiki products being installed in many prestigious sites and in over 80 countries worldwide.
